ANNUAL REPORT 2021

TURNING RESEARCH INTO ACTION FOR CHILDREN AND YOUNG PEOPLE
ABOUT UNICEF INNOCENTI

The Office of Research – Innocenti is UNICEF’s dedicated research arm. Its prime objectives are to improve international understanding of issues relating to children’s rights and to help facilitate full implementation of the Convention on the Rights of the Child, across the world.

UNICEF Innocenti undertakes cutting-edge strategic research on key issues affecting children and young people, addresses research questions set in collaboration with country and regional offices and other external partners, and publishes regularly in peer-reviewed journals to ensure its methodologies and results are of the highest standards. UNICEF Innocenti’s established research workstreams focus on child well-being, including on:

- adolescents
- gender equality
- child-friendly family policies
- children in the digital age
- child poverty and equity
- violence against children and women
- children migrating alone or with families
- child labour and exploitation
- factors behind learning outcomes, including teacher absenteeism and weaknesses in the system.

In 2021, the office graduated its digital research workstream from an emerging area to an established workstream, underscoring its maturity after five years of incubation and reflecting the growing importance of this work within UNICEF and for children and young people, particularly in the COVID era.

GLOSSARY
Note from our Director

The outbreak of COVID-19 forever changed life as we knew it. While the development of vaccines brings hope, their uneven distribution reduces the odds of reaching 70 per cent of people in every country by mid-2022. As the global community contends with learning losses affecting a whole generation and inflation coincides with a record rise in child poverty, new conflicts and emergencies threaten children’s lives.

Millions of families have fled their homes to escape war, conflict or climate-related hazards. And rising temperatures, loss of biodiversity and extreme weather events endanger life on earth. The view is bleak, but finding solutions starts with evidence of what works.

In 2020, UNICEF Innocenti responded to this need by launching our office-wide COVID-19 Rapid Research Response. Building on this platform, in 2021 we expanded the scope of our work by amplifying children’s voices, opinions and experiences, exploring emerging research areas, and producing fresh and innovative reports.

*Vite a Colori (Life in Colour)* tells the stories of Italian adolescents in the first year of COVID-19, while *Life in Lockdown* seeks to understand the immediate mental health effects of the pandemic, reviewing evidence on more than 130,000 children and adolescents across 22 countries. *What Makes Me? Core capacities for living and learning* explores life skills that children need to develop over the early part of the life course, and which contribute to their personal well-being and development. *Gender Solutions*, an upcoming report, showcases the impact of gender-related evidence at UNICEF and rewards its generation and use.

While new findings are essential to our work, we have significantly expanded our Children and COVID-19 Research Library, which now contains more than 3,300 high-quality social science articles. Once again, we brought together the best, most innovative and impactful evidence generated by UNICEF in the tenth edition of *The Best of UNICEF Research*, which culminated in a global awards ceremony with our Executive Director.

Our strong partnerships with regional and country offices, and dedication to co-creative work, have fostered even more engagement with key policymakers and paved the way for UNICEF Innocenti findings to shape solutions in several countries. For example:

- Our rapid action research on digital learning informed the implementation and upscaling of the Akelius Digital Learning programme among Syrian refugee children and adolescents in Lebanon – from 200 students before COVID-19 to more than 26,000 students in 2021
- Findings from our *Disrupting Harm Kenya* report were used to develop the Nairobi County Child Protection and Welfare Policy
- Training was delivered to more than 1,000 researchers and enumerators on analytical methodologies in education and learning, social and economic policy, research facilitation, evidence synthesis, knowledge management and ethics in evidence generation
- Our behavioural science team is working with partners to address the demand-related barriers to uptake of primary health services in 12 countries across 5 regions.

Our impact and influence are also seen in the uptake of our work by policymakers at national and regional levels, and by stronger relationships with knowledge partners.

Our office engaged directly with policymakers across a diverse array of countries, including Benin, Brazil, Burkina Faso, Canada, Ethiopia, Ireland, Italy, Libya, United Arab Emirates, the United Republic of Tanzania.

Our contributions to the 2021 G20 Summit received strong recognition. These included a policy brief on digital learning, which was one of the official policy briefs for the final Communiqué; participation in a G20 side event on mental health with Health Ministers; facilitation of a workshop on inclusion and equal opportunities for
the Y20; and several contributions to the G20-related discussions on health, financial track and women.

Our knowledge partnerships provided us with the opportunity to spotlight important issues for children:

- We generated cutting-edge reports on the impact of increasing learning losses with the World Bank, the Organisation for Economic Co-operation and Development (OECD) and United Nations Educational, Scientific and Cultural Organization (UNESCO)

- Our collaboration with the World Food Programme (WFP) revealed the nutritional impacts of school closures on children

- Together with the United Nations High Commissioner for Refugees (UNHCR) and the World Bank, we produced data-driven contributions addressing critical knowledge gaps on children and youth and forced displacement

- Our convening acumen brought together key stakeholders, such as the United Nations Population Fund (UNFPA), the World Health Organization (WHO) and Population Council-Kenya to set a global research agenda for female genital mutilation; and the International Monetary Fund (IMF) and the UN Department of Economic and Social Affairs (UN DESA) by highlighting our Social Spending Monitor, which dives deeply into public spending on children during COVID-19

- Our work on efforts to end violence against children and women was presented to the White House Gender Advisory Council

- We are proud to have kicked off our global research agenda on children with disabilities through a series of papers presented at the 2022 Global Disability Summit, featuring background research to UNICEF’s joint report with WHO on assistive technology.

In October, we hosted the second UNICEF Innocenti Film Festival: *Narratives of childhood from around the world*, which curated and presented 38 films from 29 countries. The festival represents an enormous opportunity for UNICEF to use film and storytelling as an advocacy and public engagement tool for child rights. This year we introduced the Iris Awards and hybrid in-person/online screening options. The festival also included new partners and panel discussions with filmmakers.

Maintaining strong relationships across UNICEF divisions and offices remains a top priority. These are key to identifying evidence and knowledge gaps, complementary research priorities, innovation in thought leadership and strengthening synergies to reach deeper insights.

Looking ahead, UNICEF Innocenti will be even more creative, innovative and strategic about what research we undertake and how we do it – while maintaining the highest rigour and quality. We will also focus more on research uptake and influencing through convening, learning clinics, making best use of emerging tools, strategic engagement and concerted fundraising, both within and outside UNICEF.

I would like to conclude by thanking our partners and donors for their outstanding collaboration. We are eager to continue and improve upon this vital work to guide actions for children and young people.

Gunilla Olsson

  - Including the World Bank
At UNICEF Innocenti, we generate and facilitate research and convene leading experts from around the world on issues related to children, working through the organization’s headquarters’ divisions, regional and country offices and national committees, and with governments, foundations, research institutions, think tanks, universities and other partners.

Note: The designations employed in this publication and the presentation of the material do not imply on the part of UNICEF the expression of any opinion whatsoever concerning the legal status of any country or territory, or of its authorities or the delimitations of its frontiers.
EUROPE AND CENTRAL ASIA
We worked with the UNICEF regional office to support the use of behavioural science to diagnose and respond to research affecting the uptake of primary health and immunization services.

BANGLADESH, INDIA
We continued the research project *The Evidence on Educational Strategies to Address Child Labour in South Asia* with local partners, with strides made in collecting data in the two countries.

ITALY
We hosted the second UNICEF Innocenti Film Festival in Florence in October 2021 to showcase narratives of childhood from around the world and the dynamic forces shaping childhood in different contexts.

LEBANON
In partnership with the Akelius Foundation and the Swedish Committee, we carried out rapid action research looking at how a digital learning course was used in the transition to remote learning and found that children who used the course made gains in their language learning. The research informed the implementation and scale-up of the Akelius Digital Learning programme to more than 26,000 students and 1,336 teachers.

THE LAO PEOPLE’S DEMOGRAPHIC REPUBLIC
Preliminary findings from the first stage of the *Data Must Speak Positive Deviance* Research showed the positive impact of investing in building teacher capacity. The initial research showed that highly effective schools usually have principals who provide teacher support and ensure collaboration which, in turn, fosters high levels of trust, respect and innovation. The preliminary findings were embedded into existing processes including education sector analysis and planning.

AFGHANISTAN, BANGLADESH, LIBERIA, MADAGASCAR AND NEPAL
We worked with UNICEF country offices supported by the *Let Us Learn* initiative to produce a series of research briefs and reports exploring the effectiveness of education programmes aimed at reaching the most marginalized children.

AFGHANISTAN
We have worked in close coordination with UNICEF Afghanistan on a mixed-methods study of child return and reintegration in the Afghan context to support migration programming. Owing to the political transition in Afghanistan, data collection was paused in 2021 and is expected to resume in 2022. We worked with partners on a large-scale assessment of girls and boys’ learning in community-based education across remote areas of the country.

WEST AND CENTRAL AFRICA
UNICEF Innocenti launched a synthesis brief and 11 country reports providing insights into the causes of absenteeism by primary school teachers as part of the *Time to Teach* research.

AFGHANISTAN, BANGLADESH, LIBERIA, MADAGASCAR AND NEPAL
We worked with UNICEF country offices supported by the *Let Us Learn* initiative to produce a series of research briefs and reports exploring the effectiveness of education programmes aimed at reaching the most marginalized children.

AFGHANISTAN
We have worked in close coordination with UNICEF Afghanistan on a mixed-methods study of child return and reintegration in the Afghan context to support migration programming. Owing to the political transition in Afghanistan, data collection was paused in 2021 and is expected to resume in 2022. We worked with partners on a large-scale assessment of girls and boys’ learning in community-based education across remote areas of the country.

BELGIUM
We worked with the UNICEF Belgium office to support the use of cultural and visual anthropology to explore children’s experiences of migration and the impacts of migration on children’s well-being.

ETHIOPIA, SOMALIA, SUDAN
We published a series of reports from the large-scale study *Reimagining Migration Responses* on child migration and displacement in the Horn of Africa which involved interviews with 1,290 migrant children and young people in Ethiopia, Somalia and Sudan.

CÔTE D’IVOIRE, MOZAMBIQUE, NIGERIA
We initiated new research to strengthen birth registration in the three countries. The project *Known from Birth: Generating and using evidence to strengthen birth registration systems* focuses on effective strategies to scale up initiatives and strengthen birth registration systems.

KENYA
We launched the first of a series of national reports from the *Disrupting Harm* project. The research included survey data collection in 13 countries across East Asia and eastern and southern Africa. The Kenya report provided an evidence-driven guide for countries to increase prevention and improve response to online child sexual exploitation and abuse (OCSEA).

GHANA, LEBANON, NIGERIA
We started new research that assesses the impacts of the cash transfer programmes in these countries using quantitative and qualitative research methods. The studies in African countries are carried out under the *Transfer Project*.
Highlights of 2021

2021 marked the end of the UNICEF Strategic Plan cycle for 2018–2021 and highlighted a period of strategic planning for the start of a new outcome-focused Strategic Plan for 2022–2025. This greater emphasis on outcomes requires, above all, robust evidence of the rapidly evolving risks and opportunities for children, of what works, and why and how to scale up and strengthen systems.

As the organization’s dedicated research centre, UNICEF Innocenti has a critical and expanding role in producing research and evidence to inform policymaking and programming.

The pandemic has underscored the office’s increasing focus on investigating how strong national systems can deal with shocks and safeguard social services. Strengthening systems, in turn, requires a greater focus on research – for it is only by applying rigorous analysis to complex challenges at global, regional and national levels that UNICEF will be able to find and suggest the best solutions for governments and other stakeholders. As the economic fallout and social costs of the COVID-19 crisis continued, UNICEF Innocenti carried out a wide range of activities in 2021 looking at how the pandemic has affected children. We:

- studied children’s experiences of COVID-19 (in Canada, Italy and Madagascar), the new poor and the effects of economic contraction on children’s well-being in West and Central Africa
- generated evidence highlighting the digital divides globally and regionally, analysed remote learning responses for pre-primary learners and drew attention to the need for implementation and scaling-up research
- published a further report *The State of the Global Education Crisis: A Path to Recovery* with UNESCO and the World Bank to warn about growing learning losses and inequalities caused by school closures (updated estimates suggest learning poverty could increase from 56 per cent to 70 per cent because of COVID-19, with this generation standing to lose US$17 trillion in lifetime earnings). These closures not only affected children’s learning but also impacted their overall well-being
- launched the *COVID-19: Missing more than a classroom* report in collaboration with the World Food Programme (WFP). The report investigated the impact of school closures on school feeding and children’s nutrition, finding 39 billion in-school meals had been missed by the start of 2021
- maintained the *Children and COVID-19 Research Library*, started by UNICEF in 2020, which now contains more than 3,300 high-quality social science articles produced around the world, including a quarterly thematic digest containing evidence on the impacts of COVID-19 on issues such as mental health, violence against women and children and disability
- produced a dedicated research brief of the mega-map on child well-being, developed with the Campbell Collaboration, highlighting new evidence syntheses of relevance to COVID-19 and children
- generated a rapid evidence assessment on interventions to promote vaccine update and non-pharmaceutical (behavioural) interventions to mitigate the spread of COVID-19 in Europe and Central Asia in conjunction with the UNICEF Europe and Central Asia Regional Office (ECARO) and the London Metropolitan University
- established and co-chaired, with Sheffield University, a Campbell Collaboration Global Coordinating Group for Evidence Synthesis on Children and Young Persons’ Well-being
- supported the design and delivery of the inaugural *Cochrane Convenes*, which drew on experience of the COVID-19 pandemic to bring together leaders from across the world to explore and recommend changes needed in evidence synthesis to better prepare for and respond to future global health emergencies
supported the design and delivery of the WHO Global Evidence to Policy Summit, which aimed to accelerate the role of evidence as a catalyst for policy and societal change towards more equitable, resilient and sustainable global health in a post-COVID-19 context.

collaborated with the McMaster Health Forum to generate a report on the Global Commission on Evidence to Address Societal Challenges which aims to strengthen the use of evidence by decision-makers drawing upon lessons from the COVID-19 response.

CONFLICT AND CLIMATE CHANGE CONTINUED TO BE AN IMPORTANT CONTEXTUAL BACKDROP

In addition to the pandemic, climate and conflict also influenced our work in 2021. The seventeenth edition of UNICEF Innocenti’s flagship series, The Innocenti Report Card on Child Well-Being in Rich Countries, takes its first look at the physical, social and natural environments in which children in high-income countries live, from climate change to poverty. The analysis for the Report Card 17 was completed in 2021, with the report set to be published in May 2022.

The Reopening with Resilience series explored lessons from remote learning during COVID-19 to build more resilient education systems as climate change increases the intensity and frequency of extreme weather events. Climate change, along with COVID-19 and conflict, continues to be a serious threat to children’s rights and futures and was a key issue for evidence-based advocacy in 2021. COVID-19 continued to hamper data collection, especially affecting the mobility and travel of teams, leading to delays in programme implementation and changes to workplans and timelines.

There are rising conflicts in several countries (such as Ethiopia, Burkina Faso, the Democratic Republic of the Congo and Yemen) in which the Transfer Project and the GRASSP research programme are being implemented, so UNICEF Innocenti has been working more closely with country offices to manage fieldwork and develop studies that deal with these specific contexts.

In 2021, UNICEF Innocenti contributed to the process leading to the G20 Summit to ensure that evidence on children fed into the discussions on the three pillars of the Italian G20 presidency: people, planet, prosperity. These included:

- the policy brief Digital Learning for Every Child: Closing the Gaps for an Inclusive and Prosperous Future, prepared by UNICEF Innocenti in collaboration with the Joint Research Centre of the European Commission and UNICEF Programme Group, was accepted by the T20 engagement group as one of the official policy briefs for the final Communiqué
- facilitation of a workshop on inclusion and equal opportunities for Y20 (the youth arm of the G20), in collaboration with the Young Ambassadors Society (YAS)
- participation in the side event of G20 Health Ministers on Mental Health at the G20 Global Health Summit, and actively contributed to G20-related discussion groups on health, financial track, women (W20) and others
- as a member of the global reference group, UNICEF Innocenti also brought together organizations, such as the United Nations Population Fund (UNFPA), UNICEF, WHO and Population Council-Kenya, working on female genital mutilation (FGM) to produce a global research agenda. The document outlines evidence gaps and research priorities that need to be addressed to eliminate FGM over the next five years and provides approaches to enable uptake and effective use of the evidence generated (A Research Agenda to Strengthen Evidence Generation and Utilisation to Accelerate the Elimination of FGM | UNICEF).
Research in the spotlight

This section highlights the key results in research generation and use achieved in 2021, which received the most attention or had the most influence and stirred policy and programming action.
Social and economic policy

A total of 13 collections of primary data from households and individuals across multiple countries/regions including Burkina Faso, the Democratic Republic of the Congo, Ethiopia, Ghana, Italy, Madagascar, Mozambique and the United Republic of Tanzania, were carried out despite COVID-19 limitations. This enabled us to continue to:

- generate evidence and insights on vulnerability, poverty and social protection despite COVID constraints
- meet donor obligations and support countries
- contribute to their emergency programming/system development through up-to-date research.

The research will also contribute to the rapid development of child-focused social protection systems across the globe as, at present, only around one in eight countries has any universal child allowance.

Expansion of our contribution to evidence-based advocacy and engagement on social and economic policy increased in 2021. Multiple engagements with policymakers took place across a diverse range of countries (ministers and ministries in Benin, Brazil, Burkina Faso, Canada, Ethiopia, Ireland, Libya, United Arab Emirates, the United Republic of Tanzania) and national statistical offices in UNICEF’s eastern and southern Africa region. This resulted in strong feedback that links the work of UNICEF Innocenti to concrete action by policymakers.

Together with the International Labour Organization (ILO), we co-authored the family chapter in the World Social Protection Report 2020-22 and we are collaborating on an upcoming report on social protection and child labour.
**Vite a colori**

**OVERVIEW**

The *Vite a colori* report tells the experiences, perceptions and opinions of a group of adolescents in the first year of the COVID-19 pandemic in Italy.

This project has expanded to cover seven countries (Angola, Canada, Chile, Indonesia, Italy, Lesotho and Madagascar) across five UNICEF regions and is an example of how research in one country can cross-fertilize studies in others.

The project will offer important insights into how children have been affected by the pandemic and will provide practical and policy implications for their support. It has also generated important learning on methods that can be used in other crises or emergencies.

**METHODS, FINDINGS AND IMPLICATIONS**

The study relies on state-of-the-art qualitative methodologies, allowing UNICEF Innocenti to expand its capacity in this area, fill a gap in knowledge related to how children see the impact of COVID-19, and meet principles of child participation in line with the UN Convention on the Rights of the Child.

**IMPACT**

The project has seen the development of children’s participation in research, through a youth advisory board in Italy. It has strengthened links with UNICEF National Committees in Canada and Italy, with UNICEF Country Offices in Angola, Chile, Indonesia, Lesotho and Madagascar and with external research institutes in Canada, Indonesia and Madagascar. It has also developed a diverse network of international experts who act as advisers.
Where do rich countries stand on childcare?

OVERVIEW

Even before COVID-19, some of the world’s richest countries were failing to offer comprehensive childcare solutions to all families. In some instances, this reflected their policy priorities rather than available resources. The COVID-19 pandemic also challenged children’s education, care and well-being, as parents struggled to balance their responsibilities for childcare and employment, with a disproportionate burden placed on women. Lockdown and school closures meant that childcare was one of the worst-affected family services and this had a significant knock-on effect. The report *Where do rich countries stand on childcare?* built on previous work by UNICEF Innocenti and probed more deeply into family-friendly policies in wealthy nations.

METHODS, FINDINGS AND IMPLICATIONS

The report showed how governments can support parents and guardians through paid parental leave, affordable and high-quality childcare and other measures. Using the most recent comparable data, the report assessed the parental leave and childcare policies in the 41 high-income countries that are part of the OECD and/or the European Union. It concludes with nine recommendations on how policies can be improved to provide comprehensive solutions for all families.

IMPACT

By the end of 2021, the full version of the report was downloaded 11,558 times, appeared in 163 online articles or social media posts, and was quoted in major policy documents such as the European Commission’s report *Education and Training Monitor 2021*. The report has also become “go-to” research for international comparisons of family policies in the press, as seen in The Guardian and Yahoo.
Social Spending Monitor

OVERVIEW
Launched in 2021, this series takes a deep dive into a pressing issue affecting social spending and children. These reports include case studies from countries in quarterly briefs on COVID-19 and the looming debt crisis, debt distress in the Middle East and North Africa and other topics.

METHODS, FINDINGS AND IMPLICATIONS
This work has further established UNICEF Innocenti as a leading voice on child-responsive fiscal policy, and public services and benefits in low-and-middle-income countries. It has also demonstrated the severe effects that COVID-19 is having on public expenditures, and how official development assistance and debt-servicing contributes to the picture.

IMPACT
This work has already been influential, having been cited multiple times in policy documentation, the media and in reports by other international organizations.

The Transfer Project: A decade of exploring cash transfers and their impact on child well-being

In 2021, UNICEF Innocenti continued generating rigorous evidence on the impacts of cash transfer programmes and prompted a learning and knowledge exchange across sub-Saharan Africa under the Transfer Project. This was done in collaboration with regional and country offices, the Food and Agriculture Organization of the United Nations, University of North Carolina at Chapel Hill, national governments and researchers. New research was launched in Ghana and Nigeria, and, despite the challenges posed by COVID-19, mixed-methods primary data collections were successfully carried out in Burkina Faso, Ethiopia, Ghana, Mozambique and the United Republic of Tanzania.

Notable publications included an assessment of disability and its influence on personal well-being in Tanzania; a paper describing conducting impact evaluations in fragile and humanitarian settings; and a summary synthesis of the evidence generated by the Transfer Project since 2009. Phase 2 (2018–2021) was successfully completed, and major achievements included:
- 49 African researchers trained in impact evaluation methods
- 7 African fellows mentored
- Publication of 11 research reports
- 38 journal articles (including 36 open-access)
- 13 working papers
- 23 briefs and 21 blogs
- Evidence presented at more than 21 national dissemination events
- 79 international meetings and practitioner workshops.

The Swedish International Development Cooperation Agency (Sida) signed a new agreement with UNICEF Innocenti to support Phase 3 of the Transfer Project from 2021-2024, which will prioritize rigorous research on impact, design, implementation, and systemic integration and build investment cases for government-run cash transfers in sub-Saharan Africa.
What Makes Me? Core Capacities for Living and Learning

OVERVIEW
The What Makes Me? Core Capacities for Living and Learning report explores how ‘core capacities’ – or cornerstones of more familiar concepts, such as life skills and competences – develop over the early part of the life course and contribute to children’s personal well-being and development. The report assesses how core capacities improve the lives of children and enhance understanding of the ways in which education and broader social systems can protect and promote these capacities.

METHODS, FINDINGS AND IMPLICATIONS

Each working paper assesses the contribution of the core capacities and the perspectives from which they are applied – mental, physical, emotional and spiritual – to children’s well-being and development. They also examine the practice and policies applied by adults working with children in relation to each core capacity.

The Measuring What Matters project builds on the existing evidence base to understand better how children’s personal attributes (age and gender), and the world around them promote the use of core capacities for children’s well-being, and how policies and practices for child development support this. It outlines practical steps to improve the living and learning conditions for children globally – at school, at home and in their daily lives across their childhood and into adulthood.

IMPACT
Since the launch of What Makes Me? as part of the Web Information Systems Engineering (WISE) conference in Doha in November 2021, engagement with policy and civil society has been strong. Training on core capacities and their use in schools is planned with the Ministry of Education in the State of Palestine for the first quarter of 2022, and a presentation was given to the board of the Steiner Waldorf Schools, which is intending to apply lessons from the research on the development of teaching and learning practices in its schools worldwide.

https://www.unicef-irc.org/what-makes-me
Globally, over half of children in low- and middle-income countries cannot read and understand a simple story by the age of 10, and COVID-19 has only made this learning crisis more severe, especially for the most marginalized students. UNICEF Innocenti’s Research on Education and Development (READ) unit generates and supports the use of quality research to address the global learning crisis and ensure every child learns.

READ conducts demand-driven, country-level research spanning foundational learning, digital learning and innovation, teachers, early childhood education, inclusive education for children with disabilities, sport for development, and gender.

Across these thematic areas, READ maintains an equity focus, generating evidence on what works for the most vulnerable children.

READ focuses on research embedded within systems, policies and programmes across 44 countries, working in close partnership with governments, UNICEF country offices, regional offices, and headquarters to co-create research and maximize its use for decision-making. The unit contributes to global dialogues and fora, including the Building Evidence in Education Working Group and the Global Education Evidence Advisory Panel, on designing research for use by decision-makers.
Time to Teach

OVERVIEW

Time to Teach provides insights into the reasons for absenteeism among primary school teachers across sub-Saharan Africa. A synthesis brief for West and Central Africa and 11 new country reports were published in 2021.

METHODS, FINDINGS AND IMPLICATIONS

This mixed-methods study found that 14.7 per cent of primary school teachers in the region are frequently absent from school, 14.5 per cent are absent from class and 15.3 per cent systematically reduce instruction time. Absenteeism is higher in public schools and among younger and less experienced teachers. Despite high levels of absenteeism, evidence shows that, while teachers are generally committed to their job, the education system urgently needs strengthening to support them.

IMPACT

Findings were disseminated through five workshops organized with the UNICEF West and Central Africa Regional Office and with UNICEF country offices, targeting policymakers and partners, and through conversations on reconceptualizing how teacher absenteeism is defined.
Playing the Game

OVERVIEW
The *Playing the Game* report synthesizes findings from 10 case studies of Sport for Development (S4D) organizations operating in diverse countries and with different thematic focuses, and outlines an evidence-based framework for child and youth S4D programming. The companion practitioners’ toolkit offers guiding questions and practical recommendations for designing new programmes, guiding the expansion of existing ones to new locations, and improving programmatic and organizational aspects.

METHODS, FINDINGS AND IMPLICATIONS
The S4D framework identifies eight key S4D programme elements across the three stages of the programming cycle: design, implementation and scaling up. The framework emphasizes the need for organizations to gather information about the local context, identify target groups and establish smart partnerships to ensure smooth operation. The analysis also finds that organizations should train coaches in safeguarding children, utilize high-quality curriculum and methods, and design monitoring and evaluation approaches that can help them learn what does, or does not, work and use these lessons as a basis for sustainable scaling up.

IMPACT
The S4D main report, the practitioners’ toolkit and the case studies were launched in partnership with the Barça Foundation at a United Nations General Assembly side event in September 2021, reaching 500 plus participants across more than 75 countries. UNICEF Innocenti also presented its findings at the international SportBiz Europe meeting in October 2021 and at the High-Level Officials Meeting of the UNHCR in December 2021. The report’s findings were also included in an S4D presentation at the WISE Summit in December 2021.
Unlocking Learning: The implementation and effectiveness of digital learning for Syrian refugees in Lebanon

OVERVIEW
UNICEF Innocenti builds action research into the implementation of the Akelius Digital Learning course, which aims to improve learning for marginalized children and young people in nine countries across the Middle East, Africa and Europe. The research generates insights on what works, and how, and identifies ways to continuously improve and increase the reach of the programme.

METHODS, FINDINGS AND IMPLICATIONS
In Lebanon, where 40 per cent of school-age children and adolescents are Syrian refugees, the Akelius Digital Learning course was designed to accelerate English and French language learning and facilitate access to the Lebanese education system, where classes are taught in Arabic, French and English. As COVID-19 shut down schools and learning centres across the country, UNICEF Innocenti’s rapid action research looked at how the digital learning course was used in the transition to remote learning and found that students who used the programme made gains in their language learning. Findings also highlighted the significant support needed for teachers and emphasized their critical role in accelerating learning through digital programmes.

IMPACT
The research informed the implementation and scale-up of the Akelius Digital Learning programme, from 200 students before COVID to more than 26,000 students and 1,336 teachers.
Early childhood education

OVERVIEW
The UNICEF Innocenti research paper *It’s Not Too Late to Act on Early Learning* highlighted the need to prioritize early childhood education in the COVID-19 era, with estimates that school closures could cost pre-primary students $1.6 trillion in lost future earnings.

METHODS, FINDINGS AND IMPLICATIONS
The youngest learners in low- and middle-income countries lost more instruction days and were less likely to benefit from remote learning than their counterparts in high-income nations. Lessons from accelerated, bridging and remedial programmes can show how to mitigate the long-term educational impact for these children.

IMPACT
The findings were presented at a Global Partnership for Education (GPE) Global Education Summit side event in July 2021, attended by 400 people, with more than 500 subsequent views of the recording of the event.
Reopening with Resilience

OVERVIEW
The Reopening with Resilience research series, undertaken by UNICEF Innocenti in collaboration with the UNICEF Global Education in Emergencies team, provides analysis on remote learning responses to the global COVID-era school closures. The series highlights how the effects of COVID-19 for children in low- and middle-income countries will be severe, given low levels of learning prior to the pandemic, and the vast disparities in access to devices, internet and electricity needed for remote learning.

METHODS, FINDINGS AND IMPLICATIONS
Access to remote learning during COVID-19 school closures has been a challenge for children in low- and middle-income countries, particularly in rural areas. In many countries, broadcast media (TV and radio) were used to reach those without access to the internet. Connectivity remains a major barrier to digital learning, with two thirds of the world’s school-age children lacking access to the internet at home. Mobile phones are the most prevalent and equally distributed technology that can be harnessed for remote learning but, despite this, have been given less attention in remote learning delivery.

IMPACT
These reports build on existing evidence to highlight key lessons learned in continuing education for all students during widespread school closures, and provide recommendations to build resilience into national education systems.
Child and adolescent rights and empowerment

The Child and Adolescent Rights and Empowerment (CARE) team builds evidence to inform global, regional and national strategies. It strengthens systems and programmes on a range of child rights issues with a focus on the protection of children from violence, harm and exploitation. The CARE team’s portfolio spans work on violence against girls, boys and women, migration and displacement, child labour, gender-responsive and age-sensitive social protection, harmful practices including child marriage, and birth registration. The team works through a combination of empirical research, evidence synthesis, and thought leadership to look at the intersections of these issues through the life course of childhood and intergenerational intersections.

In 2021, UNICEF Innocenti’s CARE team made significant contributions to UNICEF’s thinking on how it will accelerate actions to achieve the Sustainable Development Goals (SDGs) in the decade ahead, through the Child Protection Strategy (2022-2030) and Gender Policy and Action Plan (GPAP, 2022-2025) development processes.

The Gender Dimensions of Violence Against Children and Adolescents discussion paper, provided evidence-backed arguments that helped UNICEF intentionally embrace a gender-transformative approach to child protection and expand its strategy to focus on violence against boys, girls and women and on violence against women beyond emergencies.

The team collaborated within UNICEF and with external partners. On migration and displacement evidence, we worked with UNICEF East Asia and Pacific, UNICEF Afghanistan, UNICEF Programme Group, Data and Analytics team, and the International Data Alliance for Children. Externally, we established new partnerships with UNHCR on refugee inclusion in national education systems and worked with UNHCR and the World Bank to produce the Joint Data Center on Forced Displacement JDC Quarterly Digest, Data and Research on Children and Youth in Forced Displacement. Collaboration with the UNICEF-UNFPA Global Programme to Accelerate Action to End Child Marriage (GPECM) led to the launch of the Strategic Technical Assistance Research (STAR) Initiative to end harmful practices.
Evidence on Educational Strategies to Address Child Labour

OVERVIEW

The *Evidence on Educational Strategies to Address Child Labour in South Asia* research project continued building evidence on effective educational strategies for reducing child labour in India and Bangladesh.

Research by UNICEF partners, the Economic Research Council in Bangladesh and Population Council in India, continues, with progress made in collecting data despite COVID-induced operational challenges.

METHODS, FINDINGS AND IMPLICATIONS

Full findings, implications and measures of impact are expected in 2022. The project stepped up information-sharing on education and child labour through:

- a *Leading Minds Online* webinar on Child Labour and COVID in June that discussed the new child labour estimates and their relevance in the light of COVID-19
- technical and strategic inputs to UNICEF global planning for the 2021 *International Year for the Elimination of Child Labour*
- publication of a *compendium of scoping paper summaries* in May, which has attracted 2,000 online views on the UNICEF Innocenti website.

IMPACT

UNICEF Innocenti anticipates the project will make a significant impact in 2022 with the publication of its main research products, including a synthesis report, country reports and working papers, and the results of a global systematic review of evidence. The project is also in the process of launching an innovative Learning Accelerator Fund that will support continuing knowledge generation by the India and Bangladesh partners. Building on this work, UNICEF Innocenti will also be making a presentation to the 2022 high-level Think20 (T20) conference during Indonesia’s G20 presidency on the theme of *Eliminating Child Labour, Promoting Human Capital and Ensuring Well-being*. 
Reimagining Migration Responses

OVERVIEW
In 2021, UNICEF Innocenti’s Migration and Displacement research programme published a series of reports from the 2020 study in the Horn of Africa. The large-scale study, Reimagining Migration Responses, in child migration and displacement in the Horn of Africa involved interviews with 1,290 migrant children and young people in Ethiopia, Somaliland and Puntland and Sudan.

METHODS, FINDINGS AND IMPLICATIONS
The reports were published at a time when the number of international migrants under 18 in the region is rising, accelerated by complex and fast-evolving economic, demographic, security and environmental drivers.

IMPACT
The reports have contributed to addressing the evidence gaps on children and young people migrating in the Horn of Africa. They provide an enhanced understanding of their protective environments, access to services and resources, and perceptions of safety, well-being and trust in authorities and other providers.

The Mixed Migration Centre, a leading source of knowledge on mixed migration, highlighted the Reimagining Migration Responses in Sudan report in its Q3 Quarterly Mixed Migration Update, covering quarterly trends and migration-related updates in the North Africa region.
Data and Research on Children and Youth in Forced Displacement: Identifying Gaps and Opportunities

OVERVIEW
UNICEF Innocenti worked with UNHCR and the World Bank to produce the Joint Data Center on Forced Displacement JDC Digest – Data and Research on Children and Youth in Forced Displacement, spotlighting several recent data-driven contributions addressing critical knowledge gaps.

We also fostered collaboration within UNICEF on migration and displacement evidence, contributing to the UNICEF East Asia and Pacific region’s Children on the Move situation analysis, and establishing new partnerships with UNHCR on refugee inclusion in national education systems and other areas.

METHODS, FINDINGS AND IMPLICATIONS
The digest provides a selection of credible, actionable evidence which practitioners and policymakers urgently need to better support those who are forcibly displaced around the world, regardless of age.

IMPACT
Collaboration on this publication provides an opportunity for further partnership with UNHCR and the World Bank on migration research.
Improving efforts to end violence against children through evidence

OVERVIEW

Building on UNICEF Innocenti and Campbell Collaboration’s Evidence and Gap Map on Interventions for Reducing Violence against Children, and the Gender Dimensions of Violence against Children and Adolescents discussion paper, UNICEF Innocenti led a coalition of partners in implementing two evidence events.

METHODS, FINDINGS AND IMPLICATIONS

The first was Taking stock of the evidence on preventing and responding to violence against children; the second was Intersections between Violence Against Children and Women: Prevention and Response: Identifying Evidence Gaps and Opportunities for Collaboration.

About 1,000 researchers, practitioners, policymakers and activists from around the world gathered virtually to

- identify existing knowledge gaps
- discuss opportunities to increase coordination to prevent and respond to both forms of violence.

Additional presentations on the Evidence Gap Map (EGM) were made at the Europe Conference of the International Society for the Prevention of Child Abuse and Neglect (ISPCAN); the INSPIRE conference supported by the UNICEF East Asia and Pacific Regional Office (INSPIRE comprises seven strategies to end violence against children); and the work on intersections between violence against children and women presented to the White House Gender Advisory Council.

IMPACT

Outcomes of these events led to the development of a shared research agenda on the intersections of violence against children and against women, a joint effort of UNICEF Innocenti with WHO and the Sexual Violence Research Initiative (SVRI).
Gender-Responsive Age-Sensitive Social Protection Programme (GRASSP)

GRASSP, a programme by UNICEF and the UK’s Foreign, Commonwealth & Development Office (FCDO), continued to accelerate efforts on research delayed by the COVID-19 pandemic in 2020. Data was collected in Burkina Faso, the Democratic Republic of the Congo, Ethiopia and the United Republic of Tanzania targeted and is to be completed in 2022.

Research on reform processes of social protection systems began with stakeholder meetings involving key government and non-governmental actors in Vietnam and will continue in 2022 in Angola, Ethiopia, Mexico and Uruguay. The programme also continued to build evidence on analytical approaches and measures for research that can help guide the integration of gender considerations into social protection including mapping social protection strategies and programmes in collaboration with UN Women.

Responding to the growing urgency of the climate crisis, and in the lead-up to the twenty-sixth United Nations Climate Change Conference (COP26), GRASSP convened a panel of leading experts on gender-responsive social protection and climate change.

Additionally, the programme continues to inform policy and research discussions in a variety of contexts, e.g., through UNICEF’s Gender Action Plan, 2022-2025 and other policy documents, and in research conducted by the International Institute for Environment and Development (IIED) on gender, climate change and social protection informed by the GRASSP conceptual framework. UN Women, as part of the Joint Programme on Universal Adaptive Social Protection in the Eastern Caribbean, has also drawn on the framework as a resource for universal basic income as a form of gender-responsive social protection discussions. The blog, Gender, unpaid care work and social protection has been cited extensively, including by the European Parliament’s study Gender equality: economic value of care from the perspective of the applicable EU funds: an exploration of an EU strategy towards valuing the care economy.
Digital engagement

In 2021, UNICEF Innocenti’s digital research programme continued its focus on evidence generation directly with children and their families. Under the Disrupting Harm project, UNICEF Innocenti carried out extensive data collection with more than 13,000 children and 13,000 caregivers in East Asia (Cambodia, Indonesia, Malaysia, the Philippines, Thailand and Vietnam), and in eastern and southern Africa (Ethiopia, Kenya, Mozambique, Namibia, South Africa, Uganda, and the United Republic of Tanzania).

This project, supported by research partners ECPAT International and the International Criminal Police Organization (INTERPOL), provides the most comprehensive overview to date on how technology facilitates the sexual exploitation and abuse of children, both online and offline, and how national protection systems are responding, or failing to respond, to this crime. In 2021, the first country assessments were finalized and launched, providing an evidence-driven road map for countries to improve prevention and response to online child sexual exploitation and abuse (OCSEA).

In parallel, we worked with the LEGO Group and Western Sydney University to conduct participatory creative workshops with children in 13 countries in Africa, Asia, Europe and South America to get their perspectives on how digital experiences and digital play can contribute positively or negatively to their well-being.

The long-term aim of this project is to support the development and testing of evidence-based measures that can guide the design and evaluation of positive digital experiences for children, and to provide political, regulatory, and civil society actors with enough evidence and tools to promote good practices for designing digital experiences for children in a way that promotes their well-being.
Disrupting Harm in Kenya

OVERVIEW

*Disrupting Harm in Kenya* is the first of a series of 13 national reports produced by this project.

FINDINGS AND IMPLICATIONS

In 2021, 12 per cent of children in Kenya aged 12-17 and who had access to the internet, were subjected to OCSEA. Most of these said the offender was someone they knew. Data from law enforcement and children’s testimonies also highlighted the ways that sexual abuse can occur along a continuum of in-person and digital interactions between offenders and victims. But response mechanisms to OCSEA, including existing legislation and public-sector capacity, often lag behind technology. These findings have direct implications for policy and prevention programmes and highlight the value of embedding responses to OCSEA into existing child protection mechanisms where possible. The findings and recommendations of this report are aimed at policymakers, law enforcement bodies, NGOs, schools and the tech industry.

IMPACT

The Government of Kenya has been involved in this project from the outset, providing feedback on data-collection tools and taking part in national consultations, to implement the report’s recommendations. Since the launch of this report in October 2021, the findings have been used to develop the Nairobi County Child Protection and Welfare Policy.

Learning at a distance

Italy was the first country in Europe to implement a national lockdown. Many children and their families saw their mobility severely restricted for several months, and school closure was widespread.

This report is part of a wider project that focused on children and parents’ experiences of using digital technology during the lockdown, drawing on data from 11 European countries (and coordinated by the European Commission’s Joint Research Centre). The report explores children’s experiences of remote learning and highlights how existing inequalities might undermine remote learning opportunities, even among those with internet access. It also provides insights on how to support children’s remote learning in the future.

Italian students missed 65 days of school in 2021, compared to a high-income country average of 27 missed days. This prolonged break is of concern as even short breaks in schooling can cause significant loss of learning for children and lead to educational inequalities in the longer term.

At least 3 million Italian students may not have been reached by remote learning due to a lack of devices or internet connectivity.
UNICEF Innocenti’s expanding research areas highlight new and emerging topics explored by the office to find answers to pressing questions for children in a changing world.
DATA MUST SPEAK
The Data Must Speak (DMS) Positive Deviance Research is a three-year, multi-country research programme that aims to identify and scale-up locally rooted solutions to improve learning. UNICEF Innocenti mobilized additional funding for DMS to expand to a total of 13 countries and facilitated 28 co-creation workshops, trainings and dissemination activities with ministries of education, UNICEF country offices and implementing partners.

In 2021, the Lao People’s Democratic Republic (Lao PDR), Nepal and Togo completed several research stages and embedded preliminary findings into Education Sector Analysis and Planning. One of the preliminary findings from Lao PDR shows the positive impact of female headteachers on learning outcomes. Only 25 per cent of headteachers are women in the total sample studied, but among the highly effective schools, 41 per cent of headteachers are women. Similar findings are found in Togo: primary school exam results and promotion rates are higher for girls in schools where the headteacher is a woman, helping to reduce existing gender disparities between girls and boys.

UNICEF Innocenti, through DMS, positioned itself as a thought leader in designing research for use through co-creation with stakeholders from the outset, sharing its research methodology through conferences and convenings and reaching over 1,200 individuals. DMS’s strong external visibility has helped to secure partnerships with the Jacobs Foundation, Schools2030, and the Norwegian Agency for Development Cooperation (Norad).

DIGITAL LEARNING
Digital learning research builds evidence generation into the implementation of large-scale, multi-country digital learning programmes.

The Akelius-UNICEF partnership, which aims to improve foundational literacy and numeracy skills to facilitate marginalized children’s participation in formal education, expanded research to Bosnia and Herzegovina, Italy, Mauritania, and São Tomé and Príncipe. Implementation research started within the Learning Passport, a partnership between UNICEF and Microsoft recognized as one of TIME Magazine’s Best Inventions of 2021.

An emerging research area is the Accessible Digital Textbooks (ADT) programme in Latin America and the Caribbean, which aims to create accessible content and tools for children with disabilities. The digital learning team at UNICEF Innocenti will embed evidence generation into the roll-out of the programme in multiple countries to understand ADT’s impact on learning outcomes and inclusion for children with disabilities, and use the evidence to inform scale-up to more countries.
Social policy

INVESTMENT CASE FOR SOCIAL PROTECTION

This work, an emerging research area for UNICEF Innocenti in collaboration with Sida and the World Bank, reviews best methodological practice for undertaking cost-benefit research to build social protection systems, deliver social services and cash transfers. The research will continue in 2022 and include social protection investment case studies of selected sub-Saharan African countries.

CHILDREN’S PERSPECTIVES ON CHILD POVERTY

This research entails understanding poverty from a child’s perspective, and how it varies within regions of a country. The work is in its first stage and represents a long-term ambition to bring children’s perspectives into measuring child poverty and providing evidence on differences within countries on the experience of poverty to better inform policy responses.

FISCAL SPACE FOR IMPLEMENTING NATIONAL CHILD POLICIES

Research on mapping and evaluating public expenditures in low- and middle-income countries, through the Social Spending Monitor and the upcoming International Public Policy Monitor, will continue in 2022. This work is designed to shed light on fiscal space for implementing national child policies and assessing best practice in public finance management.
Child rights and protection

BIRTH REGISTRATION
Birth registration within stable systems providing universal civil registration is a bedrock of child rights, ensuring that no child is exploited, excluded or discriminated against due to an absence of credible documentation proving their age. In 2021, a new project was initiated to strengthen birth registration in three countries: Côte d’Ivoire, Mozambique and Nigeria. Phase one of the project ‘Known from Birth: Generating and using evidence to strengthen birth registration systems’ focuses on policy-responsive evidence syntheses related to effective strategies to scale up initiatives and strengthen birth registration systems. Phase one of the work has been initiated in partnership with the Africa Centre for Evidence at the University of Johannesburg.

STRATEGIC TECHNICAL ASSISTANCE FOR RESEARCH
UNICEF Innocenti also launched a new initiative in collaboration with the GPECM called the STAR. This initiative aims at leveraging UNICEF Innocenti’s technical expertise in designing and conducting mixed-methods research to improve the quality of national and regional studies funded under the GPECM. In addition to providing close advisory and technical support, rapid evidence syntheses and research uptake activities will be undertaken to ensure that the research generated by the GPECM informs global, regional and national policy discussions in a timely and impactful way.
Other emerging research areas

DISABILITY

A 2020 UNICEF Innocenti humanitarian research scoping paper highlighted disability as one of 10 priority gap areas for investment. Subsequently, a series of global consultations in 2021 with organizations of people with disabilities, UN organizations, researchers, international NGOs, donors and UNICEF offices resulted in a global research agenda and strategic actions.

This further prompted the commissioning of an EGM on inclusive interventions for children with disabilities in low- and middle-income countries to be published in 2022.

2021 also saw the publication of a series of related background papers as part of UNICEF and WHO’s joint global report on assistive technologies and the development of an extensive review of research on assistive technologies and children that will be released in 2022.
MENTAL HEALTH

In 2021, UNICEF Innocenti stepped up its work on mental health, launching two rapid review reports: *Mind Matters* and *Life in Lockdown*. Both reports focused on the impact of the COVID-19 pandemic on child and adolescent mental health. The office also developed a research conceptual framework on mental health and initiated the EGM on child and adolescent mental health promotion – both of which will be published in 2022.

**Mind matters**

This report looks at the impacts of disasters and past epidemics, such as Ebola, HIV, SARS/MERS and Zika – on child and adolescent mental health and psychosocial well-being.

It examines how these insights can guide policies and programmes to support children, their families and communities during the current COVID-19 pandemic.

The report highlights proven and promising interventions culled from past experiences to mitigate the impact today – especially for the most vulnerable children and adolescents. These include social protection, care-giver skills and support, community and social support, life skills and school-based programmes, and specialized care.

**Life in lockdown**

COVID-19 lockdowns have significantly disrupted the daily lives of children and adolescents, with increased time at home, online learning and limited physical social interaction. This report seeks to understand the immediate effects on their mental health.

Covering more than 130,000 children and adolescents across 22 countries, the evidence shows increased stress, anxiety, and depressive symptoms, as well as increased alcohol and substance use, and externalizing behavioural problems. However, children and adolescents also reported positive coping strategies, resilience, social connectedness through digital media, more family time, and relief from academic stress.

The report recommends building the evidence – through surveys, longitudinal studies and mixed methodologies among other measures – on the longer term impact of the pandemic on child and adolescent mental health in low- and middle-income countries, including vulnerable populations.
BEHAVIOURAL SCIENCE

UNICEF Innocenti’s work on behavioural science took a major step forward in 2021, expanding its partners and initiatives.

The behavioural science team began working with UNICEF ECARO to help diagnose and respond to challenges affecting the uptake of primary health and immunization services. We also partnered with the global UNICEF immunization team to build country office capacity to support the application of behavioural science and human-centred design methods and to implement research to address the demand-related barriers to uptake of primary health services.

As one of the lead players in establishing UNICEF’s Behavioural Insights Research and Design (BIRD) Laboratory, we were also responsible for building the prototype BIRD Laboratory website to be launched in 2022.

An applied behavioural science web page, built for the UNICEF Innocenti website, highlights our evolving expertise and interest in this area.
Research facilitation, knowledge management and ethics
UNICEF Innocenti oversees research quality assurance and ethical evidence generation standard-setting for UNICEF worldwide. The Research Facilitation and Knowledge Management (RFKM) team focuses on research-related governance, knowledge management, capacity-development and uptake and impact activities, as well as on cross-sectoral methodological support in evidence synthesis; behavioural sciences research; implementation research; and strengthening an organizational evidence and learning culture across UNICEF and partners.
EVIDENCE SYNTHESIS, CAPACITY-BUILDING, ETHICAL EVIDENCE GENERATION

UNICEF Innocenti collaborates with and supports other parts of the organization in their generation, synthesis and use of research. It supports the commissioning of high-quality and ethical research, and the training of UNICEF colleagues in robust research management processes and methods. These include evidence synthesis products such as EGMs; rapid evidence assessments and systematic reviews; applied research; surveys; impact evaluations; and longitudinal studies. The office strives to make research accessible, particularly to governments and non-academic audiences.

In 2021, UNICEF Innocenti developed and rolled out multiple modules and capacity-building exercises to foster evidence and learning cultures to support child rights, both internally and externally. These included commencing five child-focused evidence synthesis products in the areas of birth registration, child labour, disability, gender and social protection and mental health. In addition, guidance papers and toolkits were published relating to children, ethical considerations and behavioural science programmes, and predictive analytics.

Other important activities in 2021 included the annual Best of UNICEF Research (BOUR) publication, which showcases the organization’s highest-quality, most innovative and impactful research, and which culminates in an award ceremony at the end of the year. Internal capacity-building activities organized in late 2021 included a Research Uptake and Impact workshop, conducted in collaboration with CommsConsult and an Adaptive Programming workshop.

The workshop was held jointly with development consultancy Acute Incite and the UNICEF Office of Emergency Programmes and Division of Data, Analytics, Planning and Monitoring. It built on a new open-access AGORA course on An Introduction to Thinking and Working Politically (AGORA is a free portal offering tailored learning solutions to UNICEF’s staff, partners and supporters). Applied training on research management and methods was also held for the UNICEF Eastern and Southern Africa Regional Office and its Madagascar and Malawi country offices, building enhanced understanding of effective research management processes among relevant country office staff.
To strengthen organizational research governance, a robust assessment was undertaken to determine the critical issues in the creation of open-access and open-data policies in UNICEF. Further, the Procedure for Ethical Standards in Research, Evaluation, Data Collection and Analysis was revised to reflect contemporary developments in research methods, tools, and contexts and feedback from internal and external stakeholders. Reflecting this substantial revision, the corresponding online training was updated, resulting in the creation of two different modules: one for staff, and a more basic training for external parties.

The Children and COVID-19 Research Library was started by UNICEF Innocenti in 2020 to curate the best research on the pandemic and children, and it grew and maintained its popularity in 2021. The openly searchable library continues to collect new high-quality research on the impacts of COVID-19 on children and adolescents and is updated daily. More than 3,300 pieces of research are currently included in the library.

In June 2021, UNICEF Innocenti launched a quarterly digest drawing on the latest research collected in the library and focusing on trending themes. The first issue focused on the impacts of COVID-19 on the mental health of children and youth. The second issue focused on violence against children and women during the COVID-19 pandemic. The next digest will be released in early 2022 and will focus on how children with disabilities have experienced the pandemic.

The Gender Solutions project is a new collaborative initiative between UNICEF Innocenti and the organization’s headquarters and regional offices. It aims to capture the impact of gender-related evidence at UNICEF since the launch of the first Gender Action Plan in 2014. This will inform future evidence generation linked to the new Gender Action Plan for UNICEF’s 2022-2025 Strategic Plan. The project will result in a publication highlighting case studies of impactful evidence and a series of Gender Evidence Awards to reward excellence in gender-related evidence generation and use.
Convening, thought leadership and communications
CONVENING, THOUGHT LEADERSHIP AND COMMUNICATIONS

UNICEF Innocenti convenes leaders, experts, practitioners, policymakers, young people and other stakeholders to discuss the latest evidence, identify evidence gaps and ways to fill them, share good practices and set research and policy agendas for the future. In 2021, the office continued to convene solely online, reflecting the impossibility of hosting events in Florence as the pandemic continued.

In 2021, we continued our Leading Minds Online (LMO) webinar series, staying with the theme of how COVID-19 was affecting children as the pandemic entered its third year. Four LMO events were held on diverse issues, including the looming debt crisis and COVID-19-induced debt burdens on countries; vaccines and the great divide between rich and poor countries; the effect of COVID-19 on the increase of child labour mostly among the poorest and most marginalized children; and the effects of online learning on children.

In addition to the online LMO events, we also hosted or co-hosted several other important events. In mid-2021, the office organized a workshop on inclusion and equal opportunities for Youth 20 (the youth arm of the G20), in collaboration with the Youth Ambassadors Society. The office also participated in the side event of G20 Health Ministers on Mental Health at the G20 Global Health Summit, and actively contributed to G20-related discussion groups on health, financial track, women and others.

For the first time, UNICEF Innocenti participated in the Cooperation Forum of the Rome MED – Mediterranean Dialogues, the annual high-level initiative promoted by the Italian Ministry of Foreign Affairs and International Cooperation and the Italian Institute for International Political Studies (ISPI) in Rome with the aim to address shared challenges in the Mediterranean area at both regional and international level.

And in October 2021, the UK FCDO and UNICEF Innocenti convened a webinar, “What does gender-responsive social protection have to do with the climate crisis?”. Conducted against the backdrop of the latest UN climate negotiations (COP26), the webinar facilitated a discussion on the role of GRASSP in responding to shocks caused by the climate crisis.

We also supported numerous online and hybrid global webinars and launches featuring experts and leaders from governments, academia, international organizations and think tanks. These included:

- **Global launch** of Playing the Game: A framework for child-focused sport for development programmes with the Barça Foundation during the United Nations General Assembly, reaching more than 500 participants

- **What Makes Me? Core Capacities for Living and Learning** high-level policy panel discussion and report launch was held during the WISE Summit 2021, with participation of the Minister of Basic and Senior Secondary Education from Sierra Leone, Minister of Education of the State of Palestine, UN Special Representative of the Secretary-General on Violence against Children, and the Learning for Well-being Foundation
Numerous thematic webinars, including on the intersections between violence against children and women, gender-responsive social protection, behavioural sciences and implementation research, and online side events during the Global Education Summit, Evidence and Implementation Summit and the Africa Evidence Week 2021.

In October 2021, UNICEF Innocenti hosted the second UNICEF Innocenti Film Festival, following its inauguration in 2019. The festival, entitled Narratives of childhood from around the world, curated and presented 38 films from 29 countries on the dynamic forces shaping childhood and the experiences of children in different contexts. The film festival added new partners, and features including its own Iris Awards (designed in collaboration with students) as well as hybrid in-person/online screening options for viewers. The film festival represents a unique and innovative opportunity for UNICEF to use film and storytelling as an advocacy tool for child rights.

The combination of bringing together the films’ directors and UNICEF Innocenti’s researchers as subject experts to debate and discuss issues illustrated throughout the films was compelling and amplified the power of films to illustrate research findings.

In support of the extensive research portfolio generated by the office, the communication team produced nine innovative and immersive microsites. These include:

- Best of UNICEF Research 2021
- Children in High-Income Countries
- Reimagining Migration Responses
- Reopening with Resilience
- Social Spending Monitor
- Sport for Development phase II – Playing the Game
- Time to Teach
- UNICEF Innocenti Film Festival
- What Makes Me? Core Capacities for Living and Learning

In 2021, a new social media platform strategy was developed and complemented by an increasing capacity to monitor digital engagement and inform decisions about production and timing of content through monthly digital impact reports. Use of new analytics tools such as Overton unlocked the potential to measure uptake further, particularly in policy domains. UNICEF Innocenti’s website has more than 2.8 million active users and over 200,000 active social media users, and more than 150 policy citations of UNICEF Innocenti research in policy documents of governments and multilateral and academic institutions across the globe. The report on family-friendly policies remains one of the top performing reports with more than 100,000 lifetime downloads so far.
Lessons learned
UNICEF Innocenti undertakes mid-year and end-year reviews to reflect on its work, identify risk and opportunities and to learn lessons on what works in both its research and its operations. These points are some of the key insights in 2021.

- **Understand the scale and complexity of COVID-19.** The impact of the pandemic continues to be felt markedly, and it has revealed the complex intersections between different aspects of child well-being in terms of outcomes, and response mechanisms. There is a need for strategies to assess how the effects of COVID-19 on children will evolve or persist in the coming years. UNICEF Innocenti can have a lead role in adopting a systems-level framework and perspective for viewing global megatrends (pandemics, urbanization, digital interconnectivity, climate, etc.) and their impacts on children’s rights and futures.

- **Continue using co-created country level (field-oriented approaches) when designing research projects.** UNICEF Innocenti’s active engagement with the organization’s country and regional offices, national governments and implementing partners has proved increasingly successful in aligning research priorities to evidence needs. These findings are reinforced by annual surveys conducted with country and regional offices, in which this co-creation is consistently cited as a key strength of the office. In 2022 and beyond, we will continue to co-create research with those who intend to use it, build research into implementation of programmes and policies, and facilitate real-time improvements in delivery of results. Strengthening the capacity of country and regional office teams will be needed to support them during co-creation processes with in-country stakeholders and fieldwork.

- **Plan research uptake strategies from the start.** As UNICEF Innocenti works closely with governments, UNICEF country and regional teams, it has been important to plan concrete research uptake strategies from the outset. These strategies inform the research design (generally through co-creation), implementation of the research (usually through adopting a learning-by-doing approach), and how the research can leverage key policy windows to ensure findings are used by policymakers at all levels. More time and resource investments are required to ensure robust dissemination, uptake and impact.

- **Strengthen internal and external collaboration with partners to maximize impact.** Collaboration within UNICEF Innocenti and UNICEF, as well as with external organizations, has improved in recent years, particularly since the advent of the COVID-19 pandemic, and should be sustained. Strengthening feedback loops with headquarter divisions and regional and country offices, and sustaining regular touchpoints have proved successful in emphasizing complementarity and collaboration. Working more closely with national and other partners who have grounded perspectives on change has also helped UNICEF Innocenti’s research to be nimble and alert to changing dynamics on the ground.

- **Use existing global opportunities more effectively.** In 2021, international commemorative occurrences such as the International Year for the Elimination of Child Labour, and global events such as the G20 summit were used to capitalize on a period of global exposure, agenda-setting and to enhance issue/programme/project visibility. There is considerable potential to build on these events more strategically in 2022 and beyond, with greater attention to strategy and planning.

- **Convene more online to reach more people.** Online convening has provided an opportunity to reach significantly more people than was possible in-person pre-pandemic. Even with a return to in-person convening, we should maintain our acumen in online convening. These will need to be shorter events, with easy-to-enter systems and formats rather than days-long or hours-long programmes as witnessed by the hour and half-hour LMO events, multiple online thematic convenings and the BOUR 2021 awards event.

- **Transparency and regular dialogue help in managing partner expectations.** Regular contact, open dialogue and sharing of information with partners have facilitated addressing COVID-19 delays and changes and allowed for pragmatic planning and responses.
Finance, people, partnerships
Financial resourcing and management

UNICEF Innocenti spent a total of US$8.7 million in 2021 to deliver results through research generation and use, research facilitation, knowledge management and ethics in evidence, and convening, thought leadership and communication. Three quarters of these funds were mobilized from partners, with the remainder coming from UNICEF. In 2021 alone, UNICEF Innocenti raised almost US$11.8 million in additional grant funding. In addition, we received more than US$3 million from other UNICEF offices for joint research.

The regular contribution from the Government of Italy was the most significant, followed by UNICEF core funding and complemented by diverse public and philanthropic funding sources from long-term partners (see Figure 2).

Scaling innovation: Data Must Speak about positive deviant approaches to learning

US$159,578 INTERNATIONAL DEVELOPMENT RESEARCH CENTRE (IDRC) ON BEHALF OF THE KNOWLEDGE AND INNOVATION EXCHANGE (KIX) OF THE GPE AND IDRC

Playing the Game: Phase 2 of understanding the evidence for child-focused sport for development

US$221,875 BARÇA FOUNDATION (WITH SUPPORT FROM THE SPANISH NATIONAL COMMITTEE FOR UNICEF)

Global Humanitarian Thematic Fund, Education and Social Inclusion Thematic Pool

US$393,963 VARIOUS DONORS TO UNICEF THEMATIC FUNDS

Disrupting Harm: Investigating violence against children online

US$442,738 THE FUND TO END VIOLENCE AGAINST CHILDREN
Figure 2: Top funding sources by expenditure in 2021

  - GOVERNMENT OF ITALY
  - Regular contribution

- **US$1,759,653**
  - UNITED KINGDOM, FOREIGN, COMMONWEALTH AND DEVELOPMENT OFFICE (FCDO)
  - GRASSP and Evidence on Educational Strategies to Address Child Labour in South Asia research programmes

- **US$1,679,500**
  - UNICEF CORE FUNDING
  - Institutional budget and regular resources

- **US$645,342**
  - SWEDEN, SWEDISH INTERNATIONAL DEVELOPMENT COOPERATION AGENCY (SIDA)
  - The Transfer Project: Phase 2 and Phase 3
In 2021, 80 per cent of UNICEF Innocenti expenditures focused on content generation and use across the office’s three pillars of research generation and use: research facilitation, knowledge management and ethics in evidence, and convening, communications and thought leadership (see Figure 3).

Figure 3. UNICEF Innocenti expenditure by category, 2021
In 2021, the UNICEF Innocenti team comprised international professional staff, general service staff, individual contractors and consultants. The roles undertaken include researchers, managers, knowledge management and ethics, communication, convening, partnerships and planning specialists. The office also hosted skilled interns who embarked on their research journeys with UNICEF Innocenti.

There were 43 staff members in 2021, of which 70 per cent were in the international professional category and 30 per cent in the general service category. UNICEF Innocenti employed 79 consultants, with the majority holding contracts with a tenure of more than 10 months.

The largest group of staff members belonged to the 40-49 age group (37 per cent) (see Figure 4) and two thirds of staff were female (see Figure 5).

Figure 5. Gender diversity

In terms of geographical diversity, 83 per cent of the staff and consultants were from high-income countries. UNICEF Innocenti is making concerted efforts to increase the number of staff from programme countries and bring parity in staff and regional diversity in the office.
Partnerships

UNICEF Innocenti collaborates with a rich array of partners to fulfil its research mandate and extends special thanks to the Government of Italy for renewing its flexible funding and supporting the office with its guidance and institutional backing for more than 30 years. UNICEF Innocenti also thanks the resource partners listed in Figure 6 for their generous partnership and substantive intellectual support in 2021 in its research for children.

In 2021, UNICEF Innocenti progressed on new and existing research initiatives with partners, including:

- third phase of the Transfer Project (2021-2024) with the support from the Swedish International Development Cooperation Agency (Sida) which will help sustain UNICEF Innocenti’s research on cash transfers and broaden its scope into social protection systems
- implementation of a multi-country survey research in 13 countries as part of the Disrupting Harm project thanks to the funding from the End Violence Fund and in collaboration with ECPAT International and INTERPOL
- new partnerships with the Jacobs Foundation and the Committee for UNICEF Switzerland and Liechtenstein to expand the DMS positive deviance research to three new countries
- partnership with the Akelius Foundation and UNICEF headquarters, with support from the Swedish Committee for UNICEF, building implementation research into a digital learning programme to improve children’s foundational literacy and numeracy skills. In 2021, the research expanded to Bosnia and Herzegovina, Italy, Mauritania and São Tomé and Príncipe.
- collaboration with the LEGO Group, the Danish National Committee for UNICEF and the UNICEF Private Fundraising and Partnerships Division on Responsible Innovation with Technology and Ethics for Children. In 2021, together with the Western Sydney University, New York University and Sesame Street, UNICEF Innocenti supported national consultations with children in 15 countries to understand their views on how digital technology should be designed to support well-being.
Figure 6: Top new contributions to UNICEF Innocenti research programmes in 2021

Glossary

**Behavioural insights** is an inductive approach that combines insights from psychology, cognitive science and social science with empirically tested results to understand how people make decisions. It recognizes that humans are not always rational, and that we do not always follow through with what we intend. Our decisions can be affected by seemingly irrelevant things, such as how information is presented or what others are doing.

**Behavioural sciences research** is the study of human behaviour, using empirical data to investigate how people think, behave, interpret the world, understand their emotions, make decisions, communicate and relate to others.

**Blended learning** is an approach to education that combines digital platforms, content and interaction with traditional classroom methods. It requires the physical presence of both teacher and student. While students still attend “bricks-and-mortar” schools with a teacher present, face-to-face classroom practices are combined with technology-mediated (computer / tablet) activities regarding content and delivery. Blended learning is also used in professional development and training settings.

**Cash Plus** programmes provide cash payments in combination with complementary support, such as education or health services, as part of social protection efforts for the most impoverished households.

**Gender-Responsive and Age-Sensitive Social Protection (GRASSP)** is where changing gender norms, roles and access to resources is a key component of outcomes. Age-sensitive means understanding how different risks and vulnerabilities play out across an individual’s life based on her/his age.

**Evidence gap maps (EGMs)** are visual tools for presenting an overview of the state of evidence relevant to a topic, theme or sector to signpost where evidence exists and/or where it is lacking. They usually summarize and present evidence from systematic reviews and primary studies (impact evaluations) and on occasion, from other EGMs. An EGM highlights the available evidence, and the evidence gaps by presenting them in an interactive and user-friendly visual format.

**Evidence synthesis** is the process of bringing together information and knowledge from a range of sources to inform debates and decisions on policies, programming and future evidence generation. Evidence synthesis products are produced according to rigorous quality standards, using explicit and transparent methodology to minimize bias. Evidence synthesis products include rapid evidence assessments and rapid reviews, systematic reviews and EGMs.

**UNICEF Innocenti’s Children and COVID-19 Research Library** is an open-access database collecting research from around the world on COVID-19 and its impacts on children and adolescents.
A gender-transformative approach addresses the causes of gender-based inequalities and works to transform harmful gender roles, norms and power imbalances.

Global Kids Online (GKO) is an international research network that aims to generate and sustain a rigorous, cross-national evidence base around children’s use of the internet. The GKO network was developed by UNICEF Innocenti, the London School of Economics and Political Science (LSE) and the EU Kids Online network.

The Global Partnership to End Violence Against Children is a unique public-private collaboration that includes United Nations agencies, governments, industry, regional bodies, civil society, young people, advocates and champions, all focused on one thing: making the world safe for children.

Implementation research is the integration of research within existing programme implementation, systems, and policymaking cycles to improve programme outcomes (e.g., acceptability, appropriateness, feasibility, fidelity, sustainability, coverage) and overcome implementation bottlenecks. It also includes meaningful engagement and leadership roles for decision-makers, including implementers, within research.

Life course lens acknowledges that a person’s age and their stage in life has implications for the risks and vulnerabilities that they face (which social protection can help to address).

The Organisation for Economic Co-operation and Development (OECD) is an intergovernmental economic organization with 36 member countries, which was founded in 1961 to stimulate progress and economic growth.

Sport for Development (S4D) refers to the use of sport, or any form of physical activity, to provide children and adults with opportunities to achieve their full potential through initiatives that promote personal and social development.

The Sustainable Development Goals (SDGs), also known as the Global Goals, were adopted by all United Nations Member States in 2015 as a universal call to action to end poverty, protect the planet and ensure that all people enjoy peace and prosperity by 2030.

Time on task in education refers to the portion of instructional time that teachers spend directly involved in teaching. This is a synthesis of slightly different existing definitions that fits the way time on task was measured in the field for the Time to Teach study.

The Transfer Project is a multi-country social protection research initiative established in 2018. It is a collaborative effort by UNICEF Innocenti, the Food and Agriculture Organization of the United Nations (FAO), the University of North Carolina at Chapel Hill, UNICEF regional and country offices, national governments and local research partners.
